Learn how to Learn

“Assessment for Learning style and improvement in
Academics”

Jeetender Jangra

About Us.

We are working on brain and behavior of individual. One of our programs is to improve the concentration power and memorization ability of human's BRAIN. It is very beneficial for each and every individual student because their brains catch up these things very quickly and it really helps them to secure good marks and a very good academic performance throughout their learning career.

Our Services.

Wisdom of mind aims at providing a comprehensive solution to students, parents, individuals from all walks of life with:-

- **Brain Waves Scanning**
- **Mid Brain Activation**
- **Intelligence Building Programming**

BRAIN WAVES SCANNING

All the human activity their strength, weakness personality acquiring methods, best/preferred learning style, is based on the distribution of neuron cells in different brain lobes. Our brain is divided into two parts left brain and right brain.

BWS is an abbreviation of Brain Waves Scanning to know inborn potential and multiple intelligence including all strengths, weakness and their remedies. It is based on the scientific study of ridged skin patterns found on fingers and soles. These patterns are formed during the fetus development stage, 13 to 19 weeks and neuron formation in brain also take place during this period, so these are synchronized with each other it is medically proven.

All of our hobbies, qualities, strengths, weakness, logical thinking, motor skills, music intelligence, multiple intelligence, quotients (IQ, EQ, CQ, AQ), acquiring methods, best learning style, brain dominance(left brain vs. right brain), core competencies, personality and behavior. All of above is based on neuron distribution of in our brain. All active neuron distribution is synchronized with our dermatoglyphics.

Anatomically the human hands dominate all other organs in terms of relative importance; the hands are sources of physiological and psychological information of any individual.

Centuries of study and research works has enabled development of brain waves scanning. This science in coordination to the Multiple Intelligence Theory of Dr. Howard Gardner (Howard University) has developed an accurate means to provide latent information of any individual with the help of fingerprint study and analysis. This method of analysis is known as Brain waves Scanning (B.W.S.).

Benefits for children:

- ✓ Know inborn potential.
- ✓ Visual, Auditory and Sensory development.
- ✓ Identify learning style of your child.
- ✓ Identify you Child Talent/Capabilities.
- ✓ Discover Strength and Weakness of your child.
- ✓ Future planning in their interested field.
- ✓ Future Building.
- ✓ Selection of subject and stream.
- ✓ Differentiate Interest and Intelligence of your child.
- ✓ Knowing the balance between right and left brain.
- ✓ Pathway/Guideline to secure career.

Benefits for Professionals:

- ✓ Kick Start to Success.
- ✓ Self-awareness.
- ✓ Guiding factor for improvement
- ✓ Identify your skills.
- ✓ Human Resource Development.
- ✓ Review your performance over your intelligence.
- ✓ Understanding person's Psychology/Nature.
- ✓ Eliminate your negative behavior elements.
- ✓ Maintain Co-ordination with family, friends and other social associations.
- ✓ Filling the gap of miscommunication.
- ✓ Realization of Responsibilities

Brain Activation

The midbrain, also called the mesencephalon, is a small region of the brain that serves as a relay center for visual, auditory, and motor system information.

The midbrain is located above the brain stem of human beings. It is responsible for the perception of stimuli and the subsequent communication with the right and left hemispheres to process this perceptive information.

Typically, as part of the lower brain centers, the mid brain is not subject to an individual's conscious awareness. **Dr Makoto Shichida** who devoted more than 40 years of research into the functioning of the brain, actually uses the term "Interbrain" rather than Midbrain.

In the human cerebrum, there is a section called the interbrain that lies between the left and right hemispheres. It is crucial to awaken this so-called third brain in order to improve the capabilities of the human brain.

How It Works

We have a team of experts who give personalized attention to every child and help them to activate their mind with unlimited power.

We conduct a workshop for children wherein we guide them through the techniques of activating their mind and feeling the surrounding only through all senses.

Through the workshop, we help the children to read blind folded, which proves the fact that the child's mid brain function gets activated and once that's done then your child's hidden potential gets unleashed one by one. What we basically do at Mind Activation is.

- To help the children bring out their hidden potential which they otherwise cannot bring out
- To help them develop their body and mind in totality
- To transfuse high creativity and sharp sensitivity so that they can be successful in their future life

Brain Activation Benefits.

- ✓ Develops concentration (Learn Faster).
- ✓ Improve memory power,
- ✓ Enhance concentration power,
- ✓ Higher self-esteem and confidence,
- ✓ More agricultures thinking style and sharper mind,
- ✓ Stress management during revision and homework,
- ✓ Expands memory (Recall when needed specially in Exams)
- ✓ Increase the logical and mathematical ability.
- ✓ Reinforces child's weak areas.
- ✓ Enhance emotional intelligence.

Intelligence Building Programming

Now a day's major problem with students is less retention power. After learning chapters generally they are lacking to retain those points in their memory, results not good performance in examination. Actually our brain get input in terms of images. This is the best learning method using right brain, but in our education we give stress to learn words and sentence. Preferred method should be to learn all the words and sentence in terms of images. This is the technique to learn faster and to retain all the contents in mind for long time. Using this method student will enjoy while learning and will able to recall mostly all the contents during examinations. All the contents will directly store to the right brain.

Benefits.

- ✓ Child will give more attention while studying
- ✓ Will retain for long term
- ✓ It will improve the speed of reading
- ✓ Child will be able to learn (understand) more contents in less time
- ✓ Amazingly improved memorization power
- ✓ Will enjoy all the subjects during class
- ✓ Will not get bored during long time continues studies
- ✓ Will be more focused every time
